

EXHIBIT 5

STATEMENT OF HERMAN E. HURST, JR.
REGARDING
RADIO MULTIPLE OWNERSHIP
OF FOUR BROADCASTING COMPANIES

I am a Radio Engineer, an employee of Carl T. Jones Corporation with offices in Springfield, Virginia. My education and experience are a matter of record with the Federal Communications Commission

The attached exhibits depict principle community contours predicted for radio stations owned by four broadcasting companies within fifteen radio markets. The four broadcasting companies are Hispanic Broadcasting Corporation ("HBC"), Univision Communications, Inc. ("UCI"), Clear Channel Communications, Inc. ("Clear Channel") and Entravision Communications Corp. ("ECC").

Table A is a summary of the fifteen markets under study (major markets where the four companies own radio stations whose principal community contours overlap) and the total number of radio stations comprising the maximum radio market within each as defined under Section 73.3555 of the Commissions Rules and Regulations. Table B is a summary of the fifteen markets considering stations owned by Clear Channel and HBC. In addition, for each market, a numbered table is attached detailing ownership of radio and television stations within each market by the four broadcasting companies. Following the numbered tables are two maps depicting the principle community contours (predicted 70 dbu field strength for FM

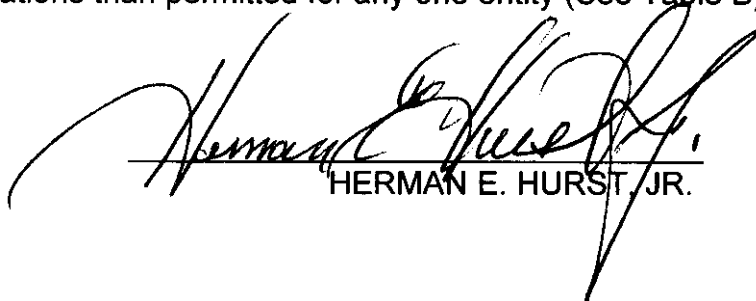

STATEMENT OF HERMAN E. HURST, JR.
PAGE 2

stations and 5mV/m field strength for AM station; in each market. The first map depicts the principal community contours of the Clear Channel, ECC, HBC and Univision radio stations. The second map depicts the principal community contours of the Clear Channel and HBC radio stations only. At the top of each map is a breakdown of the largest radio market within the composite principle community contour area depicted on the map.

The broadcast stations attributed to each of the four companies was determined using FCC records, industry publications and the Internet Website of each company. The contours depicted on the maps were calculated using the prediction methodology set fourth in the FCC's Rules and Regulations.

Within thirteen of the fifteen markets delineated, the four companies combined own or have attributable ownership in more broadcast stations than permitted for any one entity (See Table A). Similarly, within eleven of the fifteen markets, Clear Channel and HBC have ownership in more broadcast stations than permitted for any one entity (See Table B).

Dated: April 4, 2003
